AI BREWERY

ORBIT

Agentic Hyperthon

Design • Build • Launch Your Own AI Agent

3rd to 4th April 2026

About Us

ORBIT
Agentic Hyperthon

Student-led community redefining Artificial Intelligence, driven by innovation, curiosity, and collaboration. We bridge the gap between academic theory and real-world deployment by building practical solutions, conducting hands-on research, and fostering a strong learning community. Our mission is to empower peers to create impactful, scalable AI technologies for the future.

What we do :

- We develop real-world AI projects across domains like healthcare, finance, and automation.
- We organize workshops, hackathons, and mentorship programs to enhance practical skills.
- We collaborate with industry and academia to turn ideas into deployable AI solutions

ORBIT Agentic Hyperthon

ORBIT Agentic Hyperthon is a 24-hour online hackathon dedicated to the design, development, and demonstration of autonomous AI agents. It challenges participants to build intelligent systems that can perceive, reason, plan, and act independently, minimizing the need for constant human guidance.

The event emphasizes the creation of complete agent pipelines, where participants move beyond simple AI responses to develop systems capable of decision-making, self-improvement, and real-world problem solving. Projects can span multiple domains, including research, automation, healthcare, finance, legal, and more.

ORBIT focuses on innovation, technical depth, and practical implementation, encouraging participants to build agents that are not only functional but also scalable and impactful in real-world environments.

Event Timeline

ORBIT
Agentic Hyperthon

3 April 2026

10:00 AM – Hackathon Begins
Teams start building their autonomous AI agents.

5:00 PM – Mentorship / Issue Clearing Session
Open session to resolve technical doubts, architecture questions, and blockers.

4 April 2026

10:00 AM – Hackathon Ends
Development time stops.

10:00 AM – 11:00 AM – Submission Window
Submit your complete project during the submission window.
No submissions accepted after this time.

7 April 2026

Winners Announcement in
Browse 2026 at Siddaganga Institute of Technology, Tumkur

Submission Requirements

ORBIT
Agentic Hyperthon

Public GitHub Repository: You must host your project in a public GitHub repository.

Demo Video: A video (5–10 minutes) showcasing your working agent is required.

System Architecture Diagram: You need to provide a diagram outlining the system architecture of your project.

Live Demo Required: A live demonstration of your agent's functionality (no scripted walkthroughs).

Key Rules

- The project must be built during the hackathon duration.
- The solution must demonstrate an autonomous AI agent workflow.
- Use of external APIs, open-source models, and frameworks is allowed.
- Plagiarism or copying existing projects is not allowed.
- Pre-built templates are allowed, but core logic must be developed during the hackathon.
- The agent should perform end-to-end task execution autonomously.
- Judges' decision will be final and binding.

Judging Criteria

ORBIT
Agentic Hyperthon

1. System Architecture & Agent Design : (35 points)

- Clear agent workflow: Input, Reasoning, Action
- Well-defined components: Planner, Tools, Memory, Executor

2.Demo Video & End-to-End Execution : (30 points)

- Shows full agent workflow solving a task
- Demonstrates autonomous decision-making

3.Agent Intelligence & Reasoning: (20 points)

- Multi-step task handling
- Tool usage based on reasoning
- Handles different inputs correctly

4.Implementation Quality: (10 points)

- Clean integration of APIs/tools
- Stable execution

5.Innovation & Use Case: (5 points)

- Unique idea and Practical usefulness

Prize Pool

ORBIT
Agentic Hyperthon

₹10,000

Top 5 teams will receive ₹2,000 each.

Distribution:
1st Team – ₹2,000
2nd Team – ₹2,000
3rd Team – ₹2,000
4th Team – ₹2,000
5th Team – ₹2,000

Sample Ideas

ORBIT
Agentic Hyperthon

1. Research Agent

- Takes a topic as input
- Searches and gathers information
- Summarizes and refines using tools

2. PDF Agent

- Understands uploaded documents
- Answers user queries contextually
- Extracts insights and performs actions

3. Shopper Agent

- Learns user preferences
- Compares multiple products
- Recommends and adapts over time

4. Planner Agent

- Generates daily/weekly schedules
- Adjusts tasks based on priorities
- Optimizes time and productivity

5. Multi-Agent System

- Planner agent divides tasks
- Executor agent performs actions
- Critic agent reviews and improves

6. Dev Agent

- Converts prompts into code
- Detects and fixes errors
- Iteratively improves solutions
